CAREER OBJECTIVE

Ambitious Artificial Intelligence undergraduate with specialized professional training in Data Engineering through the Digital Egypt Pioneers Initiative (DEPI). Seeking a Junior Data Engineer position to leverage strong skills in Python, SQL, ETL pipeline architecture, and relational database management for building scalable data solutions.

EDUCATION

Bachelor of Science in Artificial Intelligence *Expected 06/2027*

Faculty of Artificial Intelligence, Kafr El-Sheikh, Egypt

Digital Egypt Pioneers Initiative (DEPI) — Data Engineering Track *01/2026 – Present*

Intensive professional program focusing on enterprise data warehousing, advanced SQL optimization, and ETL/ELT pipeline design.

EXPERIENCE

Junior Data Engineering Trainee *01/2026 – Present*

Digital Egypt Pioneers Initiative (DEPI) Practicum

- Designed and implemented robust end-to-end ETL pipelines utilizing Python and SQL to extract, transform, and load structured datasets into a centralized PostgreSQL data warehouse.
- Wrote and optimized complex SQL queries, window functions, and database indexes, significantly decreasing query execution times across large tables.
- Integrated data validation, error handling, and type-checking scripts using Pandas and NumPy to guarantee consistent data quality in staging layers.

Database & Backend Developer (Academic Projects) *09/2025 – 06/2026*

University Faculty Portfolio Work

- Architected and normalized relational database schemas adhering to Third Normal Form (3NF) standards to support transactional enterprise systems.
- Developed modular Python automation scripts for scheduled batch file ingestion, parsing, and automated database loading.
- Managed version control workflows, code reviews, and project documentation using Git, GitHub, and Visual Studio Code.

COURSES AND CERTIFICATES

- Data Engineering Track Completion** — Digital Egypt Pioneers Initiative (DEPI) (06/2026)
- Advanced SQL & Relational Databases Certification** — Professional Technical Training Program (08/2025)

SKILLS

Programming Languages: Python, SQL, C++, JavaScript

Data Engineering: ETL/ELT Pipelines, Data Warehousing, Data Normalization, Pandas, NumPy

Databases: PostgreSQL, MySQL, Relational Schema Design, Query Optimization

Tools & Platforms: Git, GitHub, Visual Studio Code, Linux Terminal

Languages: Arabic (Native), English (Fluent)

PROJECTS

Enterprise ETL Pipeline & Data Warehouse Mockup *Python, PostgreSQL, SQL*

- Engineered a scalable ingestion script to extract raw batch records from multi-source files and load them into a normalized staging database.
- Implemented automated transformation routines incorporating data type casting, null-value checks, and duplicate removal prior to final warehouse loading.

Automated Log Data Processing & Analytics Tool *Python, Pandas, NumPy, SQLite*

- Developed a command-line analytics utility to parse gigabytes of structured server log files and extract key operational metrics.
- Utilized Pandas dataframes and vectorized NumPy operations to aggregate performance statistics and export summary reports into relational tables.

EXTRACURRICULAR ACTIVITIES

- **University Programming Club Member** — Participated in collaborative coding workshops, algorithmic problem-solving sessions, and peer code reviews.
- **Technical Hackathons Contributor** — Collaborated in team-based software development challenges focusing on database automation tools.
